March 2019
Disclaimers and Cautionary Language

This presentation contains forward-looking information. Forward-looking information involves risks, uncertainties and other factors that could cause actual events, results, performance, prospects and opportunities to differ materially from those expressed or implied by such forward-looking information. Forward looking information in this presentation includes, but is not limited to, Blue Sky’s objectives, goals or future plans, statements regarding the estimation of mineral resources, exploration results, potential mineralization, exploration and mine development plans, timing of the commencement of operations and estimates of market conditions. Factors that could cause actual results to differ materially from such forward-looking information include, but are not limited to, failure to convert estimated mineral resources to reserves, capital and operating costs varying significantly from estimates, the preliminary nature of metallurgical test results, delays in obtaining or failure to obtain required governmental, environmental or other project approvals, political risks, uncertainties relating to the availability and costs of financing needed in the future, changes in equity markets, inflation, changes in exchange rates, fluctuations in commodity prices, delays in the development of projects and the other risks involved in the mineral exploration and development industry, and those risks set out in Blue Sky’s public documents filed on SEDAR. Although Blue Sky believes that the assumptions and factors used in preparing the forward-looking information in this presentation are reasonable, undue reliance should not be placed on such information, which only applies as of the date of this presentation, and no assurance can be given that such events will occur in the disclosed time frames or at all. Blue Sky disclaims any intention or obligation to update or revise any forward-looking information, whether as a result of new information, future events or otherwise, other than as required by law.

The information provided in this presentation is not intended to be a comprehensive review of all matters and developments concerning the Company. It should be read in conjunction with all other disclosure documents of the Company. The information contained herein is not a substitute for detailed investigation or analysis. No securities commission or regulatory authority has reviewed the accuracy or adequacy of the information presented. The Company undertakes no obligation to publicly update or revise any forward-looking statements other than as required under applicable law.

We advise U.S. investors that the SEC’s mining guidelines strictly prohibit information of this type in documents filed with the SEC. U.S. investors are cautioned that mineral deposits on adjacent properties are not indicative of mineral deposits on our properties.

Uranium deposits and resources owned by other companies referred to in this presentation have not been independently verified by the Corporation and information regarding these deposits are drawn from publicly available information. There is no certainty that further exploration of the Corporation’s uranium targets will result in the delineation of a similar mineral resources.

Mineral resources, which are not mineral reserves, do not have demonstrated economic viability. The estimate of mineral resources may be materially affected by environmental, permitting, legal, title, taxation, sociopolitical, marketing, or other relevant issues. The quantity and grade of reported Inferred resources are uncertain in nature and there has been insufficient exploration to classify these inferred resources as Indicated or Measured, and it is uncertain if further exploration will result in upgrading them to an Indicated or Measured category.

The PEA is preliminary in nature and is based solely on Inferred Mineral Resources that are considered too speculative geologically to have economic considerations applied to them that would enable them to be categorized as Mineral Reserves. Mineral Resources that are not Mineral Reserves do not have demonstrated economic viability and there is no certainty that the PEA will be realized.

This presentation has been reviewed and approved by David Terry, Ph.D., P.Geo, a Director of the Company and a Qualified Person as defined in NI 43-101.
**Investment Highlights**

- **22.7 Mlbs U₃O₈ Inferred Resource** (28 Mt @ 311 ppm U)
  - Robust PEA - NPV₈: US$135M ; IRR: 29.3% (after tax)
  - 13 years of production; simple, low-cost processing

- Resource remains open for Expansion;
  - District Scale Uranium & Vanadium Targets
  - 100% Controlled

- Best in class team with history of mineral deposit discovery and development success in Argentina

- Strong Vanadium market with Uranium rebounding

- Strong support for nuclear industry in Argentina at local and federal level

---

**TSX-V: BSK  OTC: BKUCF  FSE: MAL2**
A Grosso Group Member Company

• Pioneers of Exploration in Argentina since 1993

• Four major discoveries:
  ➢ Gualcamayo Au (Mineros SA)
  ➢ Navidad Ag-Pb (Pan American Silver Corp.)
  ➢ Chinchillas Ag-Pb-Zn (being developed as joint-venture with SSR Mining Inc.)
  ➢ Amarillo Grande U-V (Blue Sky Uranium Corp.)

• Strong focus on community relations
Blue Sky Uranium Corp.

Team Highlights

Joseph Grosso
Chairman & Director
President & Founder of Grosso Group Management Ltd. Pioneer in the exploration and mining sector in Argentina since 1993.

Nikolaos Cacos, M.I.M.
President & CEO, Director
One of the founders of the Company with over 25 years of management expertise in the mineral exploration industry. Extensive experience in providing strategic planning to and administration of public companies.

David Terry, Ph.D. P.Geo
Technical Advisor, Director
Professional economic geologist, senior executive & director with +25 years in the mineral resources sector.

Guillermo Pensado, M.Sc.
VP Exploration
Geologist involved in exploration, development and project management in the mining industry for +22 years.

Jorge Berizzo, Ph.D.
Technical Advisor
Over 30 years of uranium experience in Argentina. Senior exploration geologist & mine manager for the Argentinean National Atomic Energy Commission (“CNEA”).

Chuck Edwards, P.Eng
Technical Advisor
Specialist in uranium processing for alkaline and acid leach plants. Technical consultant to the International Atomic Energy Agency and former President of the CIM.

TSX-V: BSK  OTC: BKUCF  FSE: MAL2
Many jurisdictions believe Nuclear power is necessary:
- In more than 12 countries: 71 nuclear reactors are under construction, 165 planned, and 315 proposed
- China: Plans to spend $2.4 Trillion to expand its nuclear power generation by 6,600%*

Uranium does not trade on an open market; buyers and sellers negotiate contracts privately; Spot price has increased from ~$18/lb in late 2017 to $28.90/lb today**

Morning Star***
- Expect global uranium demand to rise roughly 40% by 2025
- Low secondary supplies will cause shortfalls; estimate that this will affect price negotiations by 2019
- To encourage new supply, expected price should rise to around $65 per pound.
Vanadium Outlook

85% of Vanadium production is from three countries, heavily leveraged to Iron Ore production and steel market dynamics

- Vanadium prices have increased from <$5/lb in 2016 to >$15/lb today\(^1\), and vanadium was the best performing battery metal in the last 12 months

- Future demand fueled by Vanadium in redox flow batteries – Industrial energy story and distribution

- China National Development and Reform Commission calls for multiple pilot projects of 100- MW-scale vanadium flow batteries by end of 2020\(^2\)

- Robert Friedland on pilot project: “…will result in vanadium flow batteries revolutionizing modern electricity grids in the way that lithium-ion batteries are enabling the global transition to electric vehicles.”\(^1\)

Argentina: Energy Industry Today & Uranium Future Opportunities

• Argentina currently highly dependent on fossil fuel and hydroelectric power but has an advanced nuclear industry:
  – 3 nuclear power plants in operation, 6 research reactors, 4 particle accelerators, 3 atomic centres, 1 heavy water plant and 1 uranium purification plant

• The government has committed to a minimum target of reducing CO₂ emissions by 15% by 2030.
  – A nuclear energy requirement that more than doubles by 2025 (~1.25 Million pounds of U₃O₈ₑ annually)

• Nuclear power industry now expanding:
  – 1 nuclear power plant now under construction
  – 2 additional in planning & 2 under proposal

• No domestic uranium for fuel production:
  – Need for security of supply could provide a “guaranteed” first customer for a domestic supplier
  – U & V could be also exported to international customers

Rio Negro Province: A Strong Nuclear Jurisdiction

• Broad local nuclear experience: research nuclear reactor, hydro-metallurgical lab & pilot U-enrichment plant

• Good infrastructure: power, water, rail, road

• Open and mining-friendly jurisdiction: gold, copper and coal exploration companies active in the last year; Calcatreu gold project has been reactivated

• Blue Sky’s projects in mostly semi-desert, low population density areas with low environmental risk
  • Elevation of <200 metres; average rainfall of 300 mm (12 inches) per year
  • Easy to operate and access year-round; <3 hour drive to major cities and airports and ~200 km to deep sea port; shallow groundwater
AMARILLO GRANDE PROJECT
Rio Negro Province

TSX-V: BSK  OTC: BKUCF  FSE: MAL2
Amarillo Grande – Regional Setting

- Uranium-vanadium mineralization hosted by Cenozoic and Cretaceous sediments - southeast extent of the prolific Neuquen oil basin
- Excellent uranium source rocks
  - North Patagonian Massif felsic intrusive and volcanic rocks
• Characteristics of Sandstone-Type and Surficial-Type uranium-vanadium deposits

• Sandstone-type
  ➢ Grants District, NM and Kazakhstan deposits
  ➢ Hosted in clastic sediments at redox boundaries
  ➢ 18% of world resources and 41% of known deposits

• Surficial-type
  ➢ Langer Heinrich, Namibia; Yeelirrie, West Australia
  ➢ Hosted in ancient riverbeds (paleo-channels)

• All Mineralization Discovered to date:
  ➢ Located at or near surface (generally <25 m depth) – low cost to explore
  ➢ Hosted by loosely consolidated clastic sediments – no drilling, blasting or crushing required for development
  ➢ Laterally extensive – kilometres scale
The Amarillo Grande Project incorporates a series of new uranium-vanadium discoveries made over 12 years along a 145 km trend covered by ~250,000 ha of mineral rights.

**Santa Barbara Discovery (2006)**
- First uranium found in Rio Negro basin
- Widespread uranium + vanadium on surface along 11 km trend

**Anit Discovery (2008)**
- 15 km airborne radiometric anomaly
- Aircore drilling along 5.5 km averaging 2.6 m @ 0.03% U₃O₈ and 0.075% V₂O₅

**Ivana Area Discovery (2011)**
- Ivana Deposit Discovery (2017)
- Initial PEA & new Resource (2019)

Ivana Deposit - New Discovery

- Near-surface (<25m) uranium & vanadium mineralization hosted by loosely consolidated sand & gravel
- Oxide (carnotite) plus partially oxidized “primary” (β-coffinite) mineralization
- Characteristics of both sandstone and surficial-type deposits

Refer to News Release dated 2/27/2019 for details

The mineral resource estimate has been prepared by Bruce M. Davis, FAusIMM, BD Resource Consulting, Inc., and Susan Lomas, P.Geo., Lions Gate Geological Consulting Inc. who are both independent Qualified Persons as set forth by National Instrument 43-101 (“NI 43-101”).

**The Reader should review all Cautionary Notes and Disclaimers at the beginning of this Presentation.**

1. Mineral Resources are not Mineral Reserves and do not have demonstrated economic viability. 2. It is reasonably expected that the majority of Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration. 3. The Mineral Resources in this estimate were not constrained within a conceptual pit shell owing to the shallow nature of the deposit (<25 m). 4. The 100 ppm uranium reporting cutoff grade is based on operative costs of $12/t, a price of $50/lb U₃O₈, and a process recovery of 90%. A density of 2.1gr/cm³ was applied. 5. The resource was estimated within distinct zones of elevated uranium concentration occurring within the host sediments. Vanadium is associated with uranium and is estimated within the same zones. There is no indication that Vanadium occurs outside of the elevated uranium zones in the Ivana deposit area in sufficient concentrations to justify developing estimation domains focused on Vanadium.
Ivana Metallurgy & Process Testing

- **Highly successful test program** optimized recovery of uranium & vanadium
- **A simple two-stage process** using low environmental impact technology & reagents

Stage 1: Simple wet scrubbing & screening of composite samples

Stage 2: Alkaline Leaching of Leach Feed Concentrate (no added oxidants & no flotation required)

- ✔ 4x increase in the grades of U & V,
- ✔ Recoveries of 89% for both elements
- ✔ 77% mass reduction
- ✔ Recoveries of 95% for U & 60% for V
- ✔ Overall process recovery of 85% for U and 53% for V
**Ivana Preliminary Economic Assessment**

Based on proposed surficial mining operation, no blasting

Refer to News Release dated 2/27/2019 for details
• 5 km arcuate mineralized corridor with high-grade core
• Corridor 200 to +500 m wide, up to 23 m thick
• Open to expansion
• Recent Pit Sampling and RC Drilling outside resource area
Historical Exploration:
- 5,044 m aircore drilling; 81 holes mineralized with average of 2.6m @ 0.03% U₃O₈ and 0.075% V₂O₅*
- 103 pits in west and central zones >50m ppm over 1m; average of 1.97m@ 0.04% U₃O₈ and 0.11% V₂O₅

*(see June 16, 2010 and Jan 20, 2011 News Releases)
Anit 2017 - Vanadium Focus

- Phase I 2017 – 1,170 m drilled + Audit of previous results & testing for extensions to mineralization.
- Large area of Vanadium mineralization identified, open for expansion, enveloping the previously defined uranium zone
Large area of vanadium (± uranium) mineralization peripheral to Anit first drilled in 2017 - open for expansion

Units hosting mineralization preserved at depths of <150 m with potential for in-situ recovery (ISR) targets

At surface uranium-vanadium mineralization identified, footprint similar to area of the Ivana Deposit

Redox boundary and multiple/stacked potentially mineralized units identified by wide spaced drilling covering an area >7 by 10 km

Ivana deposit - open for expansion
### Surficial Deposits = Low-Costs and Short Development Timeline

Weakly-cemented host rock

- No drilling or blasting required

Near-surface deposits

- Shallow pits and short haul distances

Beneficiation by simple & inexpensive wet screening/scrubbing

- can be carried out at extraction site
- Reduced transport and treatment costs due to lower mass of Leach Feed Concentrate

---

#### Potential feeder zones for an integrated producing mine, with pre-concentration at each project base

Blue Sky is a member company of the **Grosso Group**, which provides strong management and technical experience, with a focus on Argentina.

**The Amarillo Grande Project hosts a significant uranium-vanadium resource with local and district upside.**
- Near-surface uranium & vanadium
- Robust economics with low-impact mining and processing

**Exclusive rights to over 450,000 hectares of properties.** Secondary projects are ready to advance under the right conditions.

**Rio Negro Province is a supportive jurisdiction** for mining with extensive industry infrastructure.
